

Agility

Integration, Efficiency, and System Optimization

Retail Automation: From the point-of-sale, through the auditing process, to the financial statements, Agility provides retailers a cost-effective and efficient solution to meet their needs.

Agility addresses all aspects of store accounting, operations, and management reporting.

Agility is a sophisticated, easy-to-use platform for data capture and daily reporting for convenience stores and consigned dealers. Agility uses a powerful interface to collect key operating, accounting and pricebook data; all across a web browser.

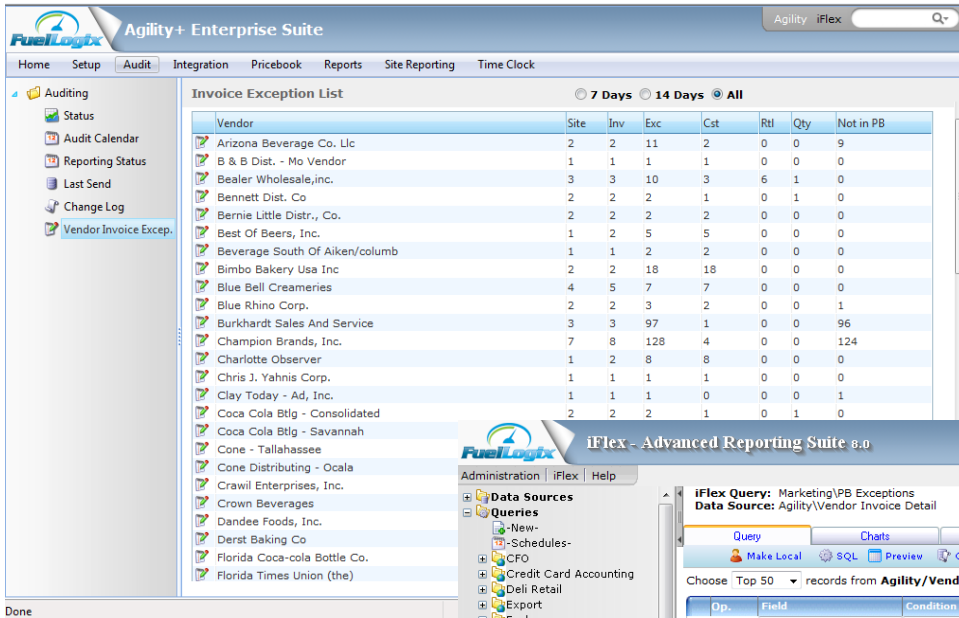

FuelLogix offers convenience store/petroleum retailers the ability to experience the optimization and efficiencies of Agility by providing the unique opportunity to implement Agility as an overlay to their existing system or as a complete replacement for their store systems.

Agility handles retailers needs:

- Shift and daily reporting
- Invoice receiving at item or category level
- Integrated pricebook
- Pricebook exception handling
- Merchandise inventory
- Fuel inventory
- QSR
- Money Orders
- Lottery
- Tank charts
- Inventory adjustments
- Physical counts and audits
- Time and attendance
- Document imaging
- Competitor price survey
- Financial and data exports
- SQL for custom reports
- Full audit trails to track changes
- Single click pricebook validation across all sites

Agility's powerful exception-auditing tool reduces labor costs, increases data accuracy, and saves money through reduced errors. The simple and fixed cost implementation reduces stress on your organization and defines your expense upfront.

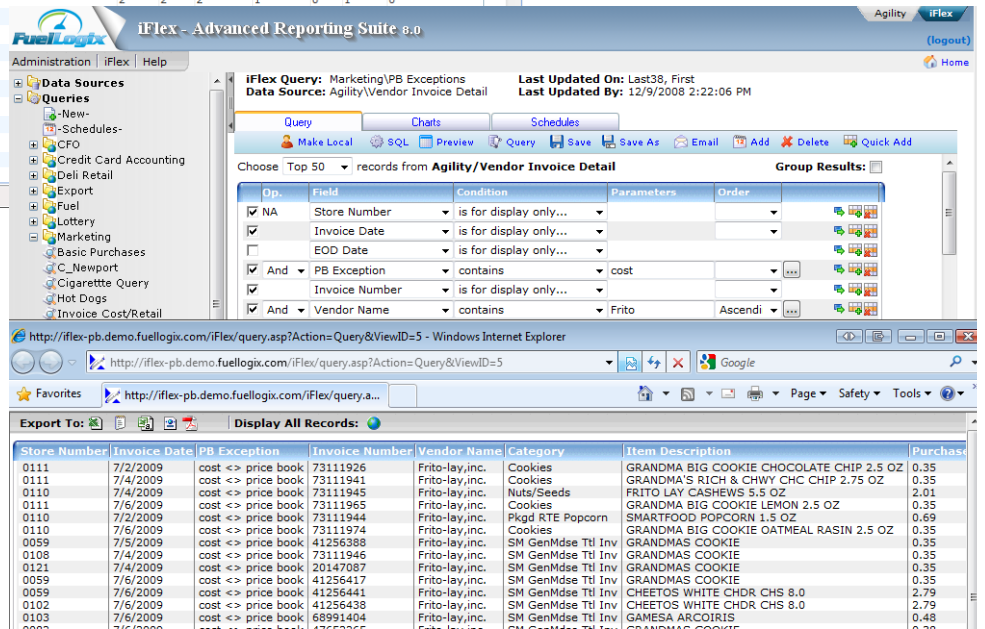

The ability to import historical data allows companies the benefit of more efficient auditing tools and optimized system performance, while retaining comparative operations and accounting history. As a 100% web-based application, Agility also has a lower total cost of ownership and ongoing support.
